Dear Bob:

I was going through some files and noticed this U.S. Patent No. 4,402,721 which names you as one of the two inventors. This patent covers the "virtual encoder" that revolutionized the I.S. Machine motion controller. Emhart was a small player before this invention and, as a result of this patent, has dominated this industry for more than twenty years. I thought that you might like to have the original.

Best wishes,

Spencer T. Smith
